Build a leader in advanced 4D metrology

Marin, Louviers, France, July 21, 2022 - Altimet SAS has concluded the takeover of AYONIS SA.

ALTIMET SAS took over Thursday 21 July AYONIS SA in order to be a leading French manufacturer of advanced 4D metrology instruments..

« The acquisition of AYONIS creates a major player in the optical metrology market with more than 1,500 installations in more than 30 countries and an unparalleled range of 4D products. The combination of our skills and our ISO9001-2015 certification represents 42 years of experience in dimensional metrology by vision and in functional surface metrology, two fields that merge in our new 4D equipment, extremely productive, combining surface size and functionality. Our pioneering customers are already using these next-generation instruments in the automotive, aerospace, watchmaking, nanotechnology, materials, fibrous and specialty chemicals, conservation and precision mechanics. Finally, our two locations in Halmstad (Sweden) and La Chaux-de-fonds (Switzerland) will further strengthen the dialogue with our customers and partners. The success of their investments and their satisfaction are the priority of our team.. »

Said Serge Carras, Founding President ALTIMET SAS.

« AYONIS welcomes its integration into ALTIMET with enthusiasm. Indeed, the merger between these two renowned manufacturers creates an important player in dimensional and surface metrology, thanks to the synergy linked to the complementarity of technologies, products and geographical locations. Our service and know-how combined within a single group will enable us to offer our customers comprehensive, innovative and rewarding solutions. »

Said Franck Roland, Director of Research and Development, Partner, AYONIS SA.

KPMG France Deal Advisory team, Elodie Coppel and Guillaume Réquin, Lyon,

SR Avocat Conseil, Maître Sophie Reygrobellet, Lyon,

Acted as advisors to the recovery.

About Altimet :

Altimet SAS, headquartered on the French bank of Geneva, has been a key supplier of optical surface measurement technologies for nearly 20 years.

Large companies around the world rely on the AltiSurf® product line and Altimet's services to accelerate profitability by optimizing the appearance and performance of their products and materials.

The acquisition of Qisab AB in 2021 and that of AYONIS consolidates an extremely active research & development policy, with patents taken in the field of Discrete Modal Decomposition (DMD) and Coherent Wave Scattering (CWS).

ALTIMET thus serves from laboratory to production line of complete industrial segments in the automotive, aeronautics, watches, nanotechnologies, materials, fibrous and specialty chemicals sectors, conservation, precision mechanics, directly as a manufacturer or through an experienced network of partners in Asia, Europe, America and Africa.

About Ayonis :

Based in Louviers and Belfort, Ayonis SA is a well-known manufacturer of three-dimensional vision metrology machines whose products have been used for nearly 30 years in the watch, automotive, aerospace, pharmaceutical, electronics, etc. ensuring quality control of parts and assemblies, improving the performance of high-precision manufactured products.

Ayonis has a range of machines perfectly adapted to the requirements of industry 4.0 from 2D ICM® digital profile projectors, DELTEC® multi-sensor 3D measuring machines, to GALAXY® platforms, new generation machines in double-sided measurement configuration that offer unprecedented performance in control time and precision.

Designed as production machines and equipped with a new software platform, the range meets the new requirements of 3D and 4D metrology, integrating perfectly into the latest generation 4.0 production environments.
